

We made the trip from Myrtle Beach, S.C. to Yosemite National Park okay. I had varied results on fuel mileage during the 3000 mile trip. With my unit, a 2004 Alfa See Ya with the 330 CAT engine, I got anywhere from 7.6 to 9.5 mpg. My fuel mileage prior to the installation of the Airtabs™ was between 7.6 and about 8.0...

Probably the best thing was when we went through some rain in Texas, the view behind us was very clear, so the Airtabs™ definitely improved rear vision for us. The vehicles all around us were putting up mist like crazy and ours was not.
